153

In the following question, choose the correct mirror image from the options (a), (b), (c) and (d).

154

Choose the alternative which is closely resembles the mirror image of the given combination.

155

Which figure completes the series?

A square is added each time and the color of the squares is inverted each time. Option A is correct.

156

Which figure completes the series?

The center circle is alternating between clear and solid. An extra line is added every second iteration. Option C is correct.

157

Which figure completes the series?

The short line moves 45° clockwise with each iteration. The Rhombus appears in the top left moves to the bottom right, replacing any shape which already there. Another shape may (or may not) appear in the top left. Option C is correct.

158

Which figure completes the series?

An alternating series in which the next figure requires the top and bottom elements plus two solid black shapes arranged vertically. Option D is correct.

Which figure completes the series?

159

The same eight elements are arranged randomly in each figure. Option B is the only option which has these same eight elements.

Which figure completes the statement?

160

The operation involves a reflection in the vertical plane through the centre of the figure. Option B is correct.

Which figure completes the statement?

161

There are three shapes in the figure. The two outer shapes are moved into the center to cover the shape already there. Option C is correct.

Which figure completes the statement?

162

The compound shape at the top rotates through 90° . The large shape at the bottom moves to the top. The color of the small shape at the bottom is inverted. Option D is correct.

Which figure completes the statement?

163

The white square moves one place anticlockwise. The black square moves one place clockwise. Option A is correct.

Which figure completes the statement?

164

The square in the top left corner moves to the center. Any horizontal lines are duplicated and rotated through 90° . Option C is correct.

Which figure is the odd one out?

165

Option C is the only figure in which opposite collared squares are on opposite sides of the line.

Which figure is the odd one out?

166

Adding the number of sides of the shapes in each figure gives eight, except for option D where it adds up to 5.

Which figure is the odd one out?

167

Option A is the odd one out. The others are all either Reflections or rotations of the same figure.

Which figure is the odd one out?

168

Option D is the odd one out. In the other figures there is one more black square than there are white squares.

Which figure is the odd one out?

169

Option E is the odd one out. It is the only figure where there is a small black square adjacent to the large black square.

Which figure completes the series?

170

Option D completes the series. An extra white square is added for each column and an extra black square is added for each row.

Which figure completes the series?

171

Option A completes the series. Each figure in column three is a product of the figures in the preceding two columns, with the added rule that if the same shape appears in both columns then it does not appear in the third column.

Which figure belongs in neither

172

The figures in Group1 contain a black diamond plus 3 white shapes. The figures in Group 2 contain a white square plus 3 black shapes. Option C belongs in neither group.

Which figure belongs in neither group?

173

Shapes are either curved or angular. The figures in Group1 black shapes at opposite corners. The figures in Group2 contain black shapes arranged vertically. Option C belongs in neither group.

Which figure is next in the series?

174

The top halves of the dominoes are in descending sequence 6, 5, 4, 3, 2, 1, Blank. The bottom halves follow the descending sequence 2, 2, 1, 1, Blank, Blank, Six. Alternate dominoes are then inverted. Option B completes this sequence.

Which figure is next in the series?

175

The top halves of the dominoes follow the sequence: 3, Blank, 3, blank, etc. The bottom halves follow the ascending Blank, 1, 2, 3, etc. Alternate dominoes are then inverted. Option D completes this sequence.

Which figure completes the grid?

176

The first and third columns are mirror images of each other, as are the second and fourth columns. Option B completes the grid.

Which figure completes the grid?

The four squares which make the top left corner block are identical to the four squares which make the bottom right corner block. The four squares which make the top right corner block are identical to the four squares which make the bottom left corner block. Option C completes the grid.

A B
C D

Which figure is the odd one out?

Option C is the only figure which does not contain the sequence of the double-diamond, concentric circles and line and the square plus diagonal line.

A B
C D
E

Which figure is the odd one out?

Option D is the only figure which does not contain only two black shapes.

A B
C D

Which Figure Completes the Sequence?

In this series, the black rectangle is alternating from top to bottom and the number of white squares is increasing by one each time.
Answer: A

A B C D

Which Figure Completes the Statement?

Begin by comparing the top figures. Does each one contain the same number of elements? If so, does each contain the same elements? If so, the elements must have been moved in some way. This is usually done by reflection or rotation.
Answer: C

A B C D

Which Figure Is the Odd One Out?

For this question, begin by looking at the elements in each figure. Are there the same number in each? Are they the same? If so, then look at the configuration.
Answer: A

Identify the Missing Square

183

Begin by looking for a relationship between the figures in the top row. If you think you have found one, then check that the same relationship holds for the second row.
Answer: C

Which Figure Completes the Grid?

Check to see if each row and column contains one, and only one, of each shape. If not, then divide the grid horizontally and vertically. Are they reflections? If not, are individual rows related in some way? What about individual columns? If not, divide the grid into four groups of four squares to see if there is a relationship between these groups.
Answer: A

184

Which figure completes the series?

185

The first figure is rotated through 90° anticlockwise to produce the second figure. The second figure is then reflected in the vertical plane to produce the third figure. This sequence is repeated.
Option B is correct as it is a reflection of the fourth figure in the vertical plane.

Which figure completes the series?

186

The line moves clockwise 135° with each iteration, whilst the diamond moves anticlockwise from corner to corner.
Option C is the next figure

Which figure completes the series?

187

The black rectangle alternates between the top and bottom position and a white square is added with each iteration.
Option A is the next figure

Which figure completes the series?

188

The horizontal line which forms part of the centre cross alternates between short and long.
Option D is the only figure where it is short.

Which figure completes the series?

189

The figure is rotated by 90 degrees anticlockwise and a black square is transformed to white with each iteration. Option B is the next figure in the series. Note that option A will not work because the black square is in the wrong position.

Which figure completes the statement?

190

The figure is rotated through 90 degrees anti-clockwise. Option C is correct
